

DEVIN WALTON

Platform Security & Automations Specialist

Ruston, LA • Remote (CST Based)

devi.walto@gmail.com • [337.704.8955](tel:337.704.8955) • github.com/devi-walto • linkedin.com/in/devi-walto

SUMMARY

Platform Security & Automations specialist skilled in system automation, reliability, and cloud security. Proficient with Linux, AWS, Python, CI/CD, IAM, and S3, with a focus on measurable results.

SKILLS

AWS • Docker • Linux (Ubuntu, Debian) • Python • Bash • Git • CI/CD (GitHub Actions) • Networking (VLANs, DHCP, DNS, ACLs, Routing) • Logging / Monitoring • Infrastructure Automation • Security Hardening & Least-Privilege Access • AWS CloudTrail/Config/CloudWatch • IAM Identity Center • Load Balancing (ALB/ASG) • VPC/Subnetting

Certifications:

- ISACA — Cybersecurity Fundamentals Certificate
- ISACA — Data Science Fundamentals Certificate

EXPERIENCE

Cyber & Digital Operations Contractor

June 2026 – Present

Cyberspace Innovation Center, Bossier City, LA

- Resolved Azure Container Apps pipeline failures alongside the tech lead that had been blocking production deployments, raising pipeline success rate by 35%
- Built full-stack features (React frontend, Go backend), including schema design and database management
- Contributed to core architectural decisions and built Docker/Docker Compose tooling for containerized environments
- Reviewed and resolved pull requests, and led feature testing prior to release

Agile Infrastructure & DevOps Team Lead

March 2026 – Present

Louisiana Tech University, Ruston, LA

- Led infrastructure for a 5-person Agile team (Scrum), improving sprint delivery efficiency by ~25–30%
- Deployed containerized IoT platform (Docker Compose: Django, React, Nginx, PostgreSQL, Mosquitto), reducing environment setup time by ~75%
- Engineered MQTT-based event pipeline from ESP32 nodes to backend, improving latency and responsiveness by ~30–40%
- Implemented reliability automation (health checks, auto-restart, env configs, CI/CD), reducing manual intervention by ~60%

PROJECTS

Enterprise Network Simulation (Cisco Packet Tracer)

November 2025

- Modeled a segmented multi-subnet enterprise network with VLAN separation and secure inter-VLAN routing
- Configured DHCP/DNS for dynamic addressing and internal name resolution; applied port security and segmentation to enforce least-privilege access
- Validated reliability and failure response under simulated load, demonstrating a controlled and secure network environment

Cloud Deployment & Security Automation Pipelines (AWS)

September 2025

- Enforced least-privilege IAM with role-based policies, reducing excess permission surface by ~40%
- Hardened S3 storage using encryption, versioning, and lifecycle rules, cutting retention costs by ~20–30%
- Automated CI/CD pipelines to standardize build/deploy flows, cutting manual configuration time by ~50%
- Deployed EC2 behind ALB/ASG across multi-AZ, improving availability and resilience under load by ~25–35%
- Enhanced observability by enabling identity-access logging and monitoring, detecting misconfigurations ~30% faster

Additional Systems Projects

Event-Driven Automation & Neural Network Engine

- **Event-Driven Automation Pipeline:** Built real-time identity sync via webhook-driven JSON ingestion, cutting reconciliation effort by 40%. **Neural Network Engine:** From-scratch, variable hidden-layer architecture yielding a 25% accuracy gain over static models

LEADERSHIP & INVOLVEMENT

Full-Time Student-Athlete (D1 Track & Field)

August 2022–2026

- Balanced a rigorous quarter-system academic load with D1 athletics maintaining academic honors scholarship

CSC / CYEN Expo – 1st Place Project Award

November 2025

Cyberstorm CTF Team Lead

November 2024

- Developed Go/Bash tooling for reverse engineering, steganography decoding, and covert network channels, accelerating solve workflows by 30%+

EDUCATION

Louisiana Tech University, College of Engineering & Science

Expected Grad: Nov 2026

Ruston, LA Bachelor of Science in Computer Science (Concentrations: Computer Engineering & Cyber Security)
