DEVIN WALTON

Platform Security & Automations Specialist
Conway, AR • Remote (CST Based)
devi.walto@gmail.com • 337.704.8955 • github.com/devi-walto • linkedin.com/in/devi-walto

SUMMARY

Platform Security & Automations specialist skilled in system automation, reliability, and cloud security. Proficient with Linux, AWS, Python, CI/CD, IAM, and S3, with a focus on measurable results.

SKILLS

Cloud & Security: AWS, Azure, IAM, IAM Identity Center, AWS CloudTrail, AWS Config, AWS CloudWatch, Load Balancing (ALB/ASG), VPC/Subnetting
Containers & CI/CD: Kubernetes, Docker, Docker Compose, CI/CD, GitHub Actions, Git
Languages & Frameworks: Python, Go, Bash, Django, React, PostgreSQL
Systems & Networking: Linux (Ubuntu, Debian), Nginx, MQTT, VLANs, DHCP, DNS, ACLs, Routing, VPN Mesh

EXPERIENCE

Agile Infrastructure & DevOps Team Lead August 2023 – Present
Louisiana Tech University, Ruston, LA
- Led infrastructure and Scrum delivery across multiple project teams over three years, authoring all user stories, runbooks, message contracts, system specifications, and architecture documentation
- Salvaged and transplanted an existing system architecture into a new project following a mid-sprint requirements change, avoiding a months-long ground-up rebuild
- Served as primary escalation point for pipeline and system incidents, troubleshooting outages outside business hours and while traveling weekly for competition to maintain uninterrupted team operations
- Reduced recurring incident load by implementing health checks, automated service restarts, environment-based configuration, and documented runbooks enabling teammates to resolve common failures independently
- Deployed containerized IoT platform (Docker Compose: Django, React, Nginx, PostgreSQL, Mosquitto) and engineered an MQTT event pipeline from ESP32 nodes to backend services, defining message contracts and delivery semantics
- Integrating Kubernetes across two on-premises nodes over a private VPN mesh network with load balancing and horizontal scaling *(in progress)*

Cyber & Digital Operations Contractor June 2026 – October 2026
Cyberspace Innovation Center, Bossier City, LA
- Resolved Azure Container Apps pipeline failures alongside the tech lead that had been blocking production deployments, raising pipeline success rate by 35%
- Built full-stack features (React frontend, Go backend), including schema design and database management
- Contributed to core architectural decisions and built Docker/Docker Compose tooling for containerized environments
- Reviewed and resolved pull requests, and led feature testing prior to release

PROJECTS

Cloud Deployment & Security Automation Pipelines (AWS) September 2025
- Enforced least-privilege IAM with role-based policies across accounts and services
- Hardened S3 storage using server-side encryption, object versioning, and lifecycle transition rules
- Deployed EC2 behind ALB/ASG across multiple availability zones for high availability under load

Event-Driven Automation Pipeline June 2025
- Built real-time identity synchronization via webhook-driven JSON ingestion, cutting reconciliation effort by 40%

LEADERSHIP & INVOLVEMENT

Full-Time Student-Athlete (D1 Track & Field) August 2022–2026
CSC / CYEN Expo – 1st Place Project Award November 2025
Cyberstorm CTF Team Lead November 2024
- Developed Go/Bash tooling for reverse engineering, steganography decoding, and covert network channels

EDUCATION

University of Central Arkansas In Progress
Conway, AR
Master of Business Administration (MBA)

Louisiana Tech University, College of Engineering & Science Graduated
Ruston, LA
Bachelor of Science in Computer Science (Concentrations: Computer Engineering & Cyber Security)
Certifications: ISACA Cybersecurity Fundamentals, ISACA Data Science Fundamentals
